

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. – 15. (Cancelled)

16. (Currently amended) A solar cell module comprising:

a solar cell element;

~~a light incidence side~~ an incident light transmitting member made of a glass adhered at a light incidence side of the solar cell element by a resin; and

a rear surface member comprising a transparent resin film adhered at a rear surface side of the solar cell element by a resin, wherein

the solar cell element comprises a semiconductor junction so as to form an electric field and is sealed with each of the resin adhering the light incidence side light transmitting member and the rear surface member,

the resin for adhering the ~~light incidence side~~ incident light transmitting member at the light incidence side of the solar cell element contains a sodium ion depositing from the ~~light incidence side~~ incident light transmitting member, and

the solar cell element comprises a one conductive type crystalline semiconductor substrate between the semiconductor junction and the resin containing the sodium ion so as to shield a diffusion of sodium ion to the semiconductor junction; and

an anti-reflection layer between the one conductive type semiconductor layer and the resin containing the sodium ion, said anti-reflection layer comprising a silicon dioxide layer.

17. (Cancelled)

18. (Currently amended) The solar cell module according to claim 16, wherein

~~the semiconductor junction structure one conductive type crystalline semiconductor substrate consists of~~ includes a single crystalline silicon layer having and has a thickness so as to shield the diffusion of sodium ions from said resin into said semiconductor junction.

19. (Previously presented) The solar cell module according to claim 16, further comprising: a one conductive type semiconductor layer between the one conductive type crystalline semiconductor substrate and the resin containing the sodium ion.

20. (Previously presented) The solar cell module according to claim 19, further comprising:

a transparent electrode between the one conductive type semiconductor layer and the resin containing the sodium ion.

21. (Cancelled)

22. (Currently amended) The solar cell module according to claim 16, wherein the semiconductor junction is formed by a first ~~the one~~ conductive type crystalline semiconductor substrate and ~~an another~~ a second conductive type crystalline semiconductor layer.

23. (Currently amended) The solar cell module according to claim 16, wherein the semiconductor junction is formed by a first ~~the one~~ conductive type crystalline semiconductor substrate and ~~an another~~ a second conductive type amorphous semiconductor layer.

24. (Currently amended) The solar cell module according to claim 23, comprising: an intrinsic amorphous semiconductor between the first ~~the one~~ conductive type crystalline semiconductor substrate and the second ~~another~~ conductive type amorphous semiconductor layer.

25 - 27. (Cancelled)
